Frequently Asked Question:

“I want to convert my fireplace to gas...”

“But where do I start?”

<http://www.chippendalerestorations.com.au/>

Chippendale Restorations Gas Fires

Chippendale Restorations are specialists at converting old fireplaces to gas in Victorian, Edwardian & Federation Houses.

<http://www.chippendalerestorations.com.au/>

What is the best fireplace for you?

If you, as the owner, gather the following information, we will be able to quickly asses which gas fireplace options are available to you.

<http://www.chippendalerestorations.com.au/>

Step 1:

Take a "front on" picture of the whole fireplace.

Include in the "photo frame" the CHIMNEY BREAST-corner/middle of room,
SURROUND-timber/marble mantle, GRATE-tiled/arched & HEARTH-tiled/stone).

Any measurements to all of the above will be very helpful!

<http://www.chippendalerestorations.com.au/>

Step 2:

Take a "45 Degree" picture of the whole fireplace (this angle will help give a sense of "depth").

If you can measure the depth of the fireplace this will be very helpful!

<http://www.chippendalerestorations.com.au/>

Step 3:

Take a picture of the nearest gas outlet, appliance or pipe (to get an idea of the length of gas pipe that will be required to run to the fireplace).

<http://www.chippendalerestorations.com.au/>

Step 4:

Take a picture of any wall vents that are present in the room (all open flame gas fires require permanent ventilation according the gas regulations AS5601). If you can measure the size of the room you are wish to heat, this will be very helpful!

<http://www.chippendalerestorations.com.au/>

Step 5:

Take a picture of the chimney (all open flame gas fires require a gas approved cowl to be fitted to the chimney pot according to the gas regulations AS5601).

Please inform us if this is a single or multi-level house & chimney
